ETNA TR JACKET

The Etna TR Jacket is a technically advanced, flexible jacket with multi-protection. It is made from 2L Gore-Tex Crosstech® Pyrad® Stretch fabric with taped seams and features a flameliner lining. The jacket provides protection against rain, wind, fluid-borne pathogens, and chemicals, and it is also flame-resistant and antistatic. Designed to feel lightweight and comfortable for the user, it includes several functional details such as ventilation openings, practical pockets, and an adjustable hood with space for a helmet, offering excellent protection in all weather conditions. The features of the Etna TR Jacket make it suitable for a wide range of professional groups with varying tasks. It is available in different color options to suit different needs, with some versions featuring fluorescent panels and reflective elements for enhanced visibility.
